OPEN SCIENCE NL

COI statements:

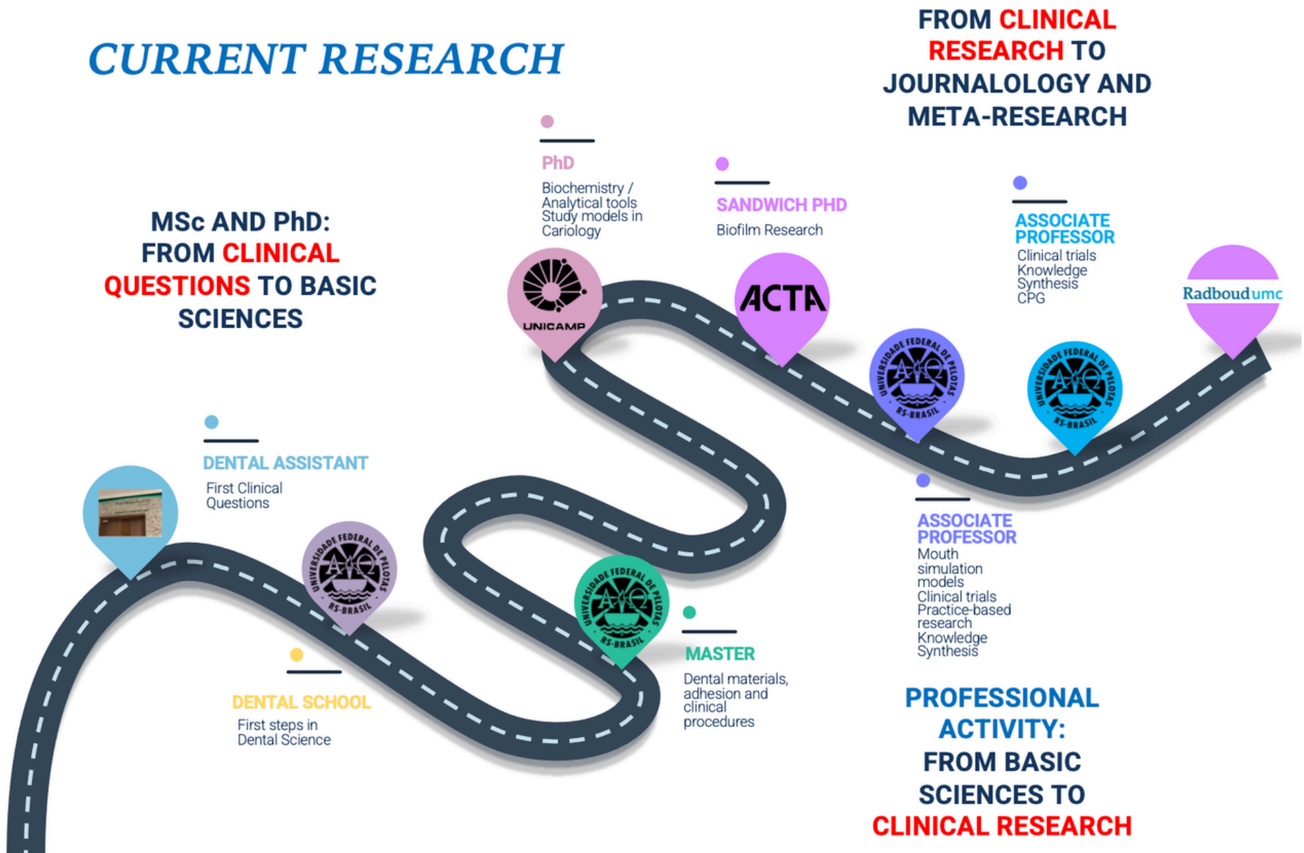

Maximiliano Cenci is funded partly by Radboudmc and NWO/Open Science NL. Signatory of the Declaration on Research Assessment (DORA), Manager of the Open Science Community Nijmegen, Member of the Open Science Task Force, and co-organizer of the Research Integrity Rounds at Radboudumc. I hope this does not mean COI for this presentation!

I am not an expert on Open Diamond Publication!

Radboudumc

About us

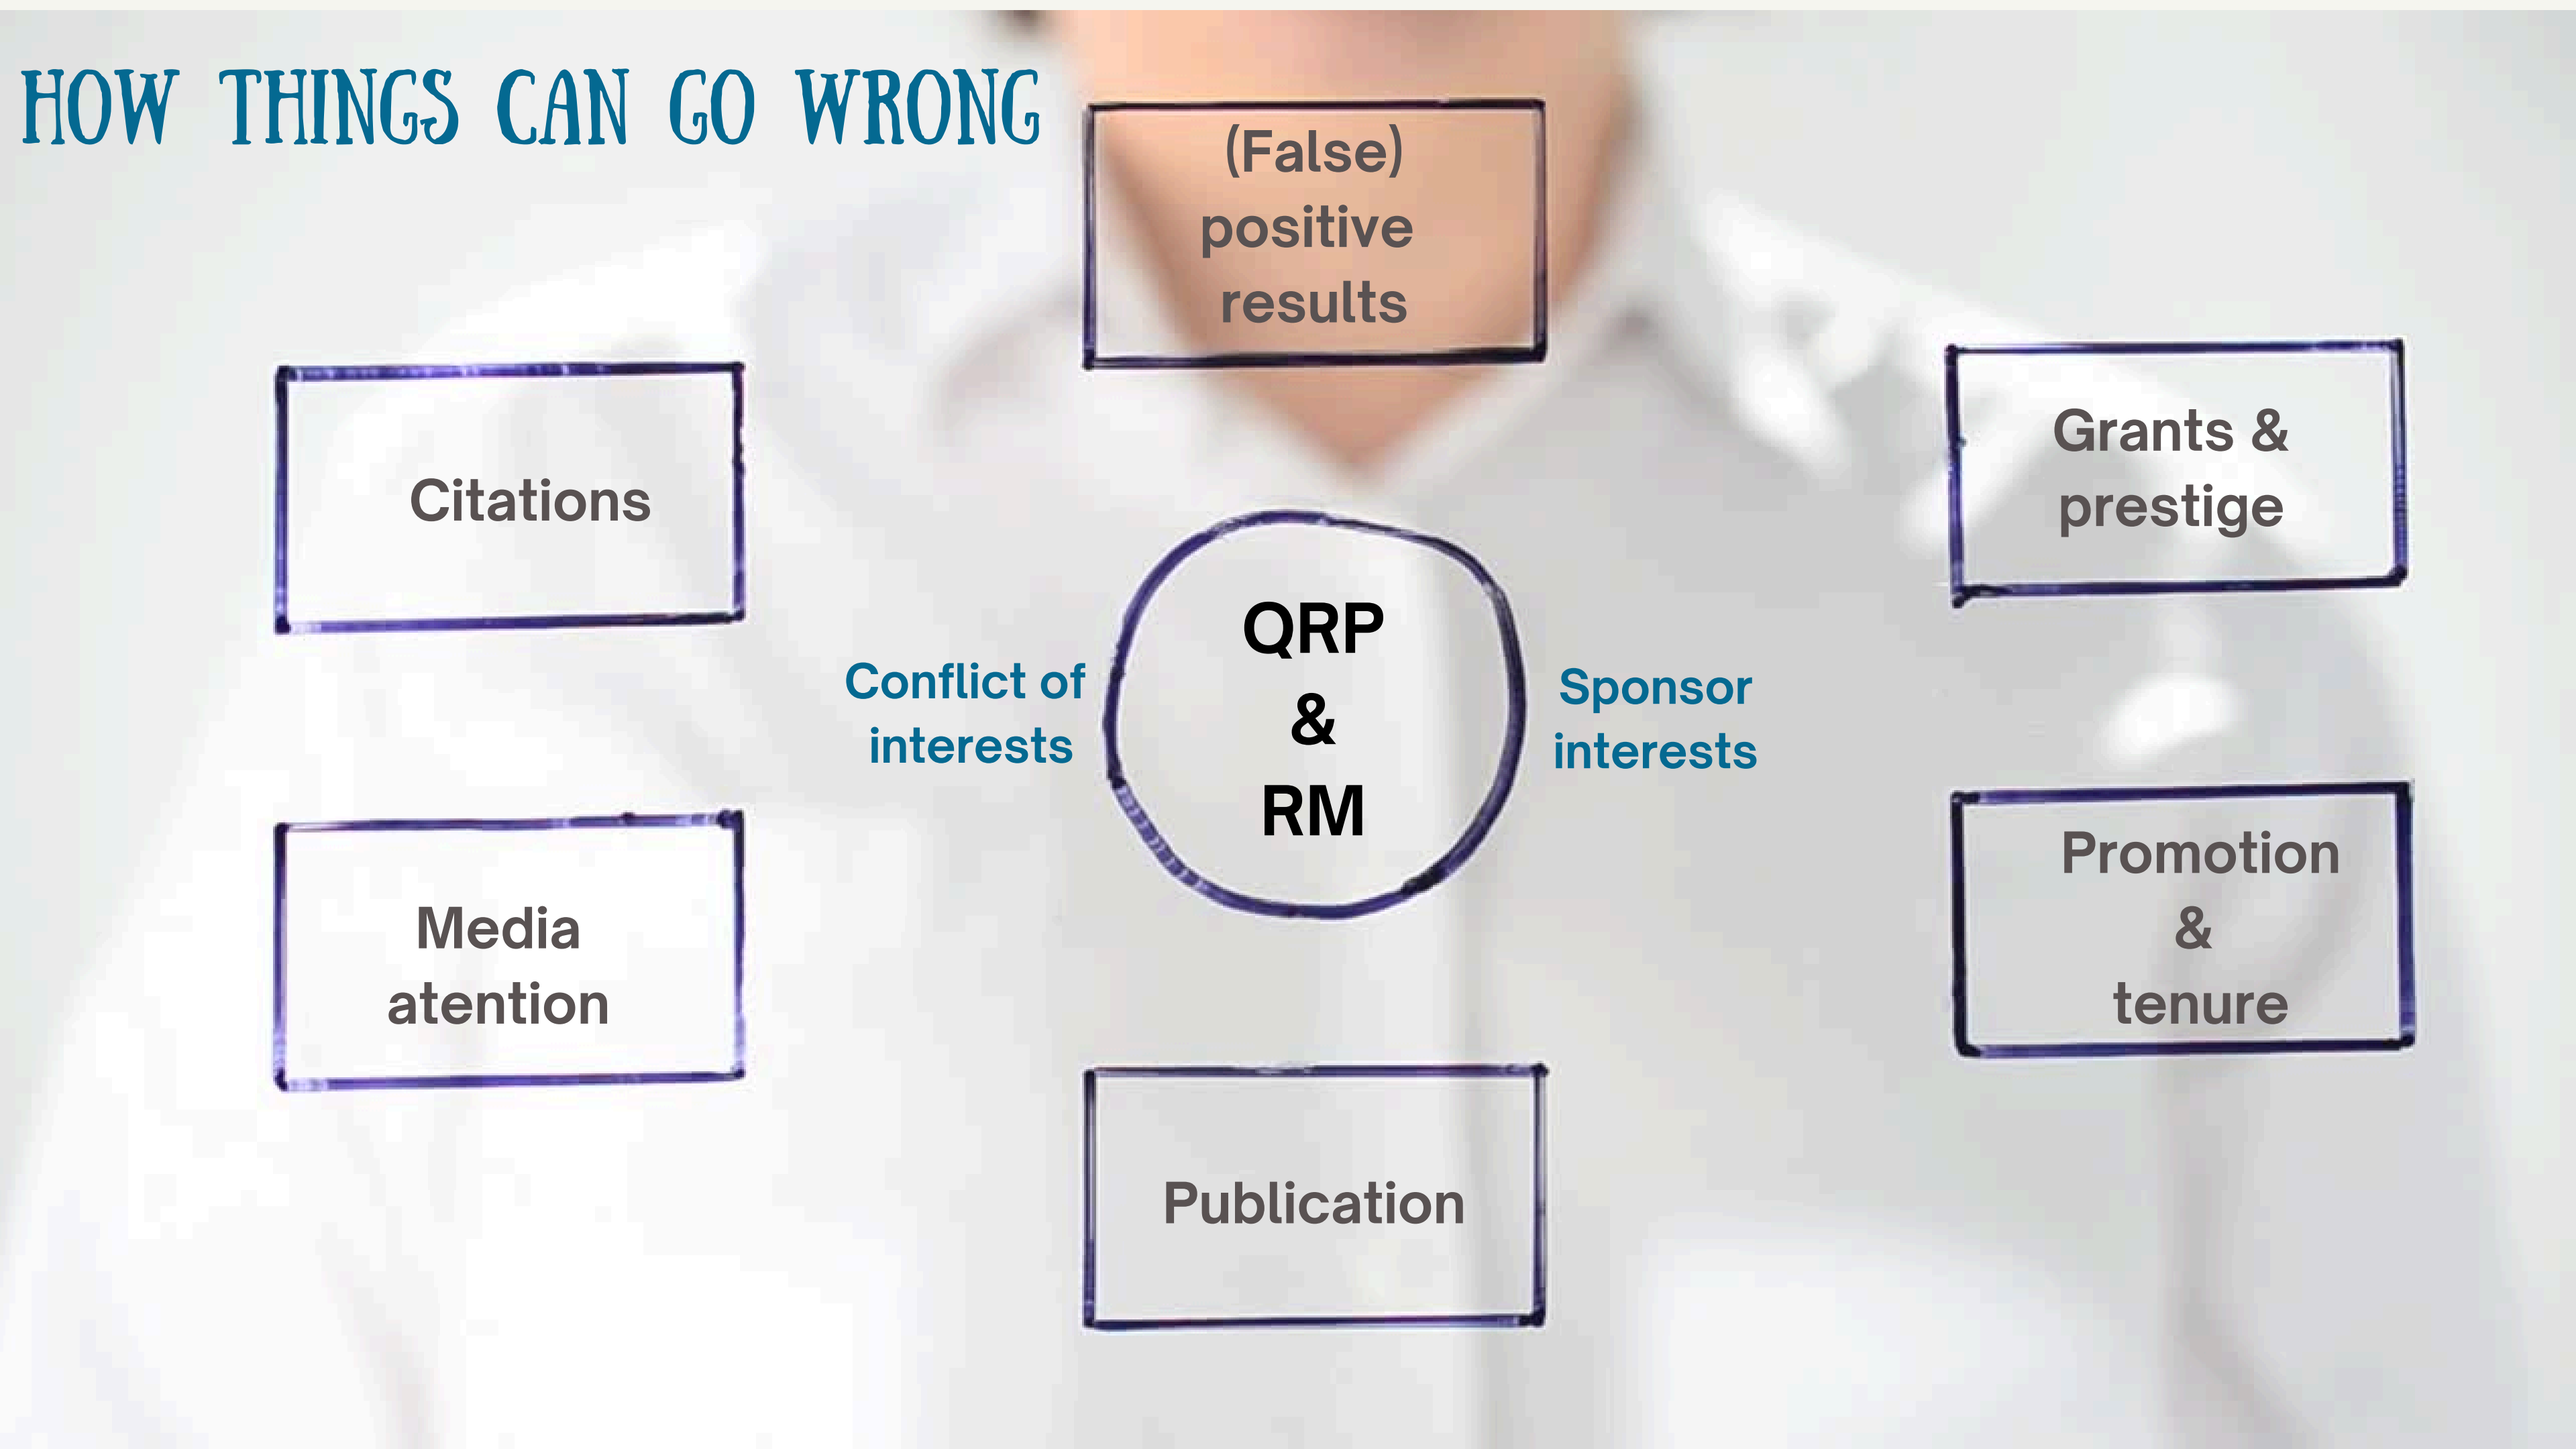

The expertise centre Diamond Open Access strengthens community-lead publishing in the Netherlands by creating and facilitating knowledge exchange and resources.

Diamond Open Access is a publication model in which scholarly work is made freely available to readers without charging authors, making it an equitable and sustainable alternative to commercial publishing.

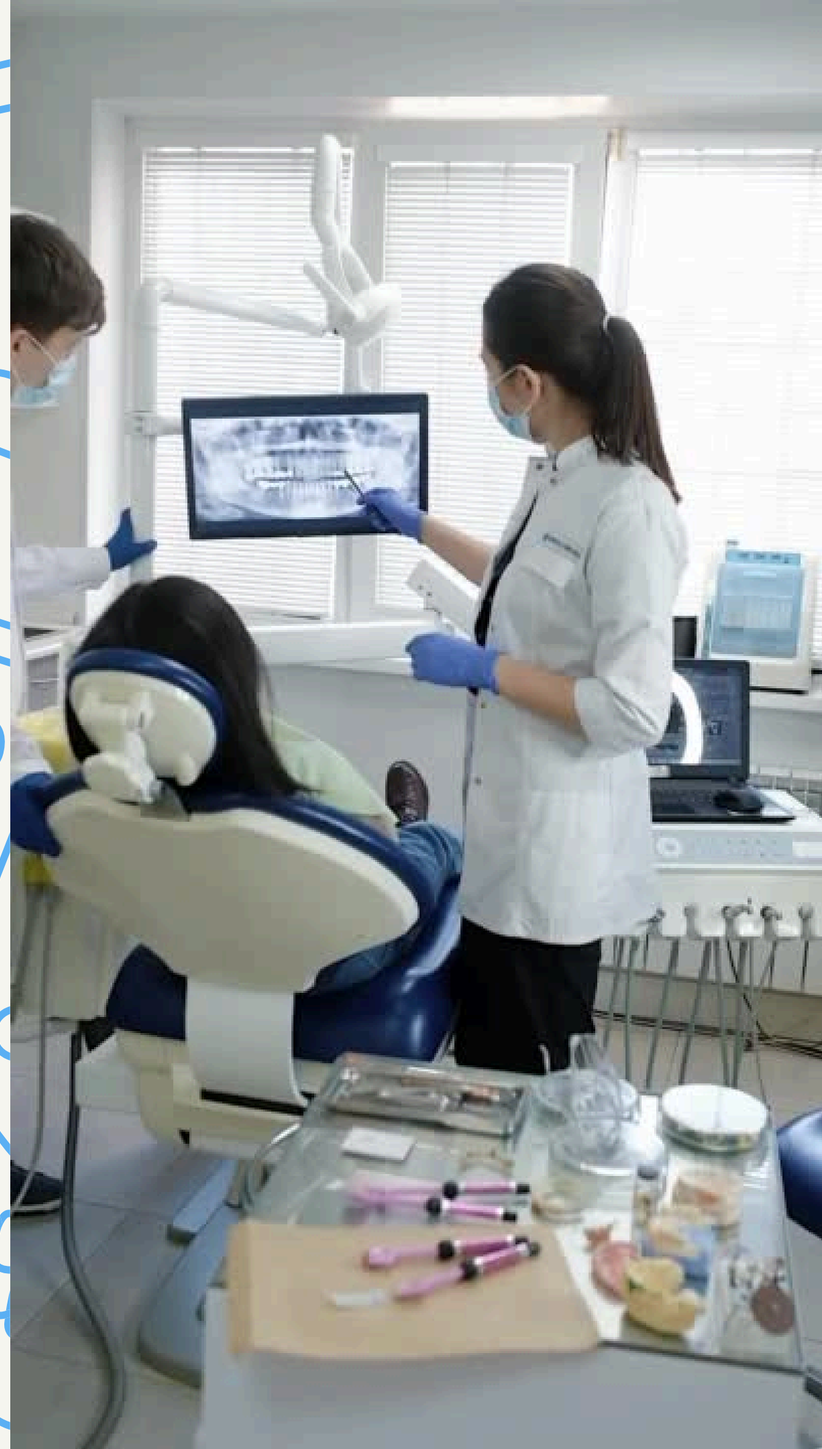

We are a diverse team of experts and advocates in scholarly publishing across Dutch universities, university presses and service providers. Our activities focus on promoting, monitor, professionalizing, and empower community-driven publishing.

The expertise centre emerged from the program *Strengthening Diamond Open Access in the Netherlands*. This program is funded by the Universities of the Netherlands (UNL) and launched by the Dutch Consortium of University Libraries (UKB).

HOW THINGS CAN GO WRONG

TRADITIONAL / NON-PROGRESSIST

HOW TO REDUCE WASTE?

1. Responsible Publication Practices
2. More attention to the process - less to products
3. Education and training for Good Research Practices
4. Infrastructure, RCR, and Open Science

Diamond OA Journal

Journals

Ecclesial Futures publishes original research and theological reflection on the development and transformation of local Christian communities and the systems that support them as they join in the mission of God in the world. We are an international and ecumenical journal with an inter-disciplinary understanding of our approach to theological research and reflection; the core disciplines being theology, missiology and ecclesiology. Other social science and theological disciplines may be helpful in supporting the holistic nature of any research. The journal fills an important reflective space between the academy and on-the-ground practice within the field of mission studies, ecclesiology and the so-called "missional church".

with studies reporting the findings of observational studies. Submissions without the required elements will be returned to the author as incomplete.

Prior approval from an Institutional Review Board (IRB) or an Ethics Review Committee is required for all investigations involving human subjects. Please see our full policies and requirements on Publication Ethics and Editorial Policies page.

A downloadable template is available below. For guidance purposes, a Research Article is typically 5000 words in length with 4 to 8 Tables and Figures.

Registered Reports

Registered Reports provide researchers with valuable external peer-reviewed feedback at the start of data collection as well as with a confirmed publication venue for the completed study. More information can be found on the COS website.

In the Registered Reports workflow, the study is submitted in two stages:

Registered Report – Protocol (Stage 1): see "Methods" article type

Research Article: please use the template "Research Article"

Registered Report –Results (Stage 2): Researchers with a published Registered Report-Protocol (Stage 1) article receive a conditional acceptance to **publish the corresponding results**, or stage 2 article, regardless of the outcome, subject to review of the full, final article to ensure adherence to best practices and to the previously accepted study design. This also applies to studies that report negative or unexpected results.

If the research article is submitted as part of the Registered Report workflow, i.e. after the conditional acceptance of a Registered Report- Protocol (Stage 1), please select "Research Article" as Article Type, and "**Registered Report –Results (Stage 2)**" as Section, upon submission, and use the appropriate template above. Also, please indicate the last 6 digits of the DOI of the previously published Registered Report to enjoy the appropriately discounted fee (see APCs section). Please use the "Registered Report - Results (Stage 2)" template as provided above.

- Research Article
- Registered Report–Results (Stage 2)

Review Article

Review Articles are considered reviews of published research or summary articles of the peer reviewed literature. They are state-of-the-art papers covering a current topic by experts in the field. They should give evidence on and provide answers to a well-defined aspect or question in a particular area. Review Articles must include a critical discussion of the reported data and give a clear conclusion with potential impacts on the standard of care. Conclusions should not be based on non-peer reviewed publication in the absence of additional supporting references from the peer reviewed literature.

A downloadable template is available below. For guidance purposes, a Review Article is typically 5000 words in length with 4 to 8 Tables and Figures.
